

UNIVERSAL EAR ATTACHMENT FOR EARRINGS

ABSTRACT OF THE DISCLOSURE

The present invention is generally related to a device for facilitating the setting of the ear attachment method on earrings. The device is comprised of a universal female clipping connector and a variety of male clipping connectors. The universal female connector is attached to the back of the earrings. Then, the user selects what kind of ear attachment method is desired and chooses a male clipping connector that will provide such method. Such male connector is then attached to the universal female connector creating earrings which can be then used by the method provided by the male connector.
